

Floor Proposal 4: Submitted by Amber D., Delegate for Group WEB 0796

Issue: I propose that the conference create a Data Analysis Committee that would be responsible for organizing existing data sets, conducting data-oriented projects (including surveys and presenting results), and developing data stewardship practices and procedures. The committee should be composed of members with previous experience in data science, data analytics, database management, reporting, and/or data ethics.

Background/Urgency: To support good data collection, storage, and reporting practices for motions approved at this ABC, a committee should be formed immediately. ACA lacks consistency in its data collection practices and presentation of results of data collected from its members. A committee of ACA volunteers who have relevant experience would facilitate a complete process from initial study design, to presentation of results, and safe storage of data for future use. Parliamentarian Opinion: Fine to proceed to the Delegates; It meets the criteria for a floor motion.
